**Re: The consortium coordinated by Télécom Bretagne, l'Institut Mines Télécom  
(response to the call for network from generic ANR 2013)**

Dear Colleague,

I am glad to confirm the support of my research team at the London Knowledge Lab, University of London, to the ORPHÉE network project, coordinated by Télécom Bretagne, Institut Mines Télécom, on behalf of a consortium associating French research teams on e-education, bringing together various disciplines such as educational technology, education, pedagogy, and computer-science.

I am delighted at this initiative, as it responds to a much-needed area of the Technology-Enhanced Learning field, and brings together a relevant and experienced team of people who are perfectly placed to carry out the work. As such, I regard this network as a great opportunity to contribute to consolidating the Technology-Enhanced Learning research community in Europe and at an international level, and to develop future collaborative research with the French research team in this area.

Professor Richard Noss PhD
